Data Caveats & Limitations

The following caveats and limitations have been identified for the Juvenile Detention Profile Survey data:

- Source data can be queried at http://app.bscc.ca.gov/joq/jds/QuerySelection.asp
- We make every effort to verify the submitted data to ensure its accuracy, but it is ultimately up to the jurisdictions (counties) to report reliable data.
- Due to rounding, numbers and percentages presented may not add up precisely to the totals provided.
- We do not collect details on policies that jurisdictions enforce that might influence these data.
- A number of juvenile facilities have opened and closed from 2002 through 2021. These changes might affect how the data are represented.
 - Inyo County: Inyo County's Juvenile Hall converted to a Special Purpose Juvenile Hall (SPJH) in January 2017.
 A SPJH is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Facility-level data provided for SPJH's do not provide meaningful trends, thus are excluded from this document.
 - o Lassen County: Lassen County's Juvenile Detention Facility closed in June 2019.
 - Mariposa County: Mariposa County operates a SPJH. Facility-level data provided for SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Mono County: Mono County operated a SPJH between 2002 and March 2014. Facility-level data provided for SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Nevada County: Nevada County's Juvenile Detention Facility closed in December 2020.
 - Plumas County: Plumas County operated a SPJH between 2002 and March 2008. Facility-level data provided for SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Siskiyou County: Siskiyou County's Juvenile Hall converted to a SPJH in February 2018. Facility-level data provided for SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Trinity County: Trinity County's Juvenile Hall converted to a SPJH in August 2014. Facility-level data provided for SPJH's do not provide meaningful trends, thus are excluded from this document.

Note. 2021 4th quarter data contains October, November, and December 2021 data. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2021	8.3	3.6	43%	5.0	60%	7.8	3.8	49%	4.0	51%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ¹ 2017 data based on January - June. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Inyo County converted their Juvenile Hall to a Special Purpose Juvenile Hall in January 2017 1

Note. ¹ Inyo County's Juvenile Hall converted to a Special Purpose Juvenile Hall (SPJH) in January 2017. A SPJH is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Facility-level data provided for SPJH's do not provide meaningful trends, thus are excluded from this document. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ² 2020 data excludes December; data unavailable. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ² 2019 data based on January - June. Lassen County's Juvenile Detention Facility closed in June 2019. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2021				53.2	100%	52.7	6.8	13%	45.8	87%

Note. ² 2019 data excludes June; data incomplete. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ¹ 2018 data based on January - July. ² San Francisco County's camp was not in use from August 2018 - February 2020 and officially closed February 2020. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ¹ 2017 Average Daily Population based on June - December. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Santa Barbara's Juvenile Hall converted to a Special Purpose Juvenile Hall in October 2011. A Special Purpose Juvenile Hall is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ¹ 2009 data based on January - August. ² Shasta County's camp was not in use from September 2009 - July 2010 and officially closed July 2010. ³ Shasta County's new camp opened in April 2021. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

	Siskiyou County converted their Juvenile Hall to a Special Purpose Juvenile Hall in February 2018 ¹										

Note. ¹ Siskiyou County's Juvenile Hall converted to a Special Purpose Juvenile Hall (SPJH) in February 2018. A SPJH is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Facility-level data for provided SPJH's do not provide meaningful trends, thus are excluded from this document. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population

(AMP) for the year.

Note. ² Camp has been unoccupied since Janaury. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Trinity County converted their Juvenile Hall to a Special Purpose Juvenile Hall in August 2014

Note. ¹ 2014 data based on January - July. ² Trinity County's Juvenile Hall converted to a Special Purpose Juvenile Hall (SPJH) in August 2014. An SPJH is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Facility-level data of provided of SPJH's do not provide meaningful trends, thus are excluded from this document. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ² 2014 data based on January - July. ³ 2006 data based on September - December. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.
