Juvenile Detention Profile Survey
Data Caveats & Limitations

The following caveats and limitations have been identified for the Juvenile Detention Profile Survey data:

- Source data can be queried at <http://app.bscc.ca.gov/joq/jds/QuerySelection.asp>
- We make every effort to verify the submitted data to ensure its accuracy, but it is ultimately up to the jurisdictions (counties) to report reliable data.
- Due to rounding, numbers and percentages presented may not add up precisely to the totals provided.
- We do not collect details on policies that jurisdictions enforce that might influence these data.
- A number of juvenile facilities have opened and closed from 2002 through 2019. These changes might affect how the data are represented.
 - Inyo County: Inyo County's Juvenile Hall converted to a Special Purpose Juvenile Hall (SPJH) in January 2017. An SPJH is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Facility-level data of provided of SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Mariposa County: Mariposa County operates a SPJH. Facility-level data provided of SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Mono County: Mono County operated a SPJH between 2002 and March 2014. Facility-level data provided of SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Plumas County: Plumas County operated a SPJH between 2002 and March 2008. Facility-level data provided of SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Trinity County: Trinity County's Juvenile Hall converted to a SPJH in August 2014. Facility-level data provided of SPJH's do not provide meaningful trends, thus are excluded from this document.
 - Siskiyou County: Siskiyou County's Juvenile Hall converted to a SPJH in February 2018. Facility-level data provided of SPJH's do not provide meaningful trends, thus are excluded from this document.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2018	19.3	13.6	70%	5.7	29%	19.4	13.1	68%	6.3	32%
2019	16.2	12.4	77%	3.8	23%	17.1	11.8	69%	5.3	31%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Inyo County converted their Juvenile Hall to a Special Purpose Juvenile Hall in January 2017¹

Note. ¹ Inyo County's Juvenile Hall converted to a Special Purpose Juvenile Hall (SPJH) in January 2017. An SPJH is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Facility-level data of provided of SPJH's do not provide meaningful trends, thus are excluded from this document. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019	21.6	14.2	66%	7.4	34%	21.0	5.0	24%	16.0	76%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019				26.0	100%	26.3	0.0	0%	26.3	100%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Santa Barbara's Juvenile Hall converted to a Special Purpose Juvenile Hall in October 2011. A Special Purpose Juvenile Hall is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Siskiyou County converted their Juvenile Hall to a Special Purpose Juvenile Hall in February 2018 ¹										

Note. ¹ Siskiyou County's Juvenile Hall converted to a Special Purpose Juvenile Hall (SPJH) in February 2018. An SPJH is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Facility-level data of provided of SPJH's do not provide meaningful trends, thus are excluded from this document. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2014	71.4	34.2	48%	37.2	52%	69.5	33.0	47%	36.5	53%
2015	77.9	37.6	48%	40.3	52%	75.7	33.6	44%	42.1	56%
2016	73.9	32.8	44%	41.1	56%	67.2	23.8	35%	43.4	65%
2017	50.1	24.5	49%	25.6	51%	50.8	11.9	23%	38.9	77%
2018	38.3	21.8	57%	16.5	43%	37.9	7.6	20%	30.3	80%
2019	41.3	22.9	56%	18.4	45%	40.0	11.8	30%	28.2	70%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019	81.2	42.8	53%	38.4	47%	79.5	17.0	21%	62.5	79%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019	32.6	29.2	90%	3.4	10%	30.0	7.0	23%	23.0	77%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019	29.4	10.2	35%	19.2	66%	30.0	8.5	28%	21.5	72%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ² Yuba County & Sutter County share a regional Juvenile Hall. The Juvenile Hall is located in Yuba County. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.
