

# Highlights from Proposition 47 Cohort 1

## Participants and Services

Over 32,000 participants received services through Proposition 47 grant funds between June 2017 and August 2020. The most common services provided, with over 80 percent of grantees offering these services, included mental health treatment, substance-use treatment, case management, employment services, and transportation.

## Grant Funds used by Grantees

**\$93,718,759**

Total amount spent by Cohort 1 grantees.

**\$75,006,176**

Total amount of funding grantees passed through to community-based organizations (80 percent).

Funding was awarded to 23 grantees on a competitive basis for projects which provide treatment to individuals involved in the legal system with a mental health condition or substance-use disorder. Grantees spent \$93,718,759 with over 80 percent of the funding passed through to community-based organizations.

## Recidivism Rates

**Below 23 Percent**

All but two grantees reported recidivism rates below 23 percent.

A comparison of recidivism rates of participants by grantee and recidivism rates in California suggest overall lower recidivism rates in Proposition 47 participants. With the exception of two grantees, all reported recidivism rates below 23 percent (ranging from 2.0% to 22.7%), whereas statewide reports suggest recidivism rates around 35 percent.
