

Residential Substance Abuse Treatment (RSAT) Program 2018 Project Summaries

Projects (in alphabetical order)

Kern County Sheriff's Department RSAT Project:

This project will utilize a Risk-Need Recovery platform to break the cycle of drugs, crime, and recidivism through the implementation of evidence-based programs and treatment. The program will serve the male population at the Kern Lerdo Detentions Facility who meet the defined criteria and have a demonstrated substance use disorder. The program includes in-custody (4-6 months) and out-of-custody (12 months) components and provides offender with rehabilitative tools for reentry as productive citizens.

Sacramento County Sheriff's Department (SSD) RSAT Project:

The Sacramento County Sheriff's Department (SSD) proposes to continue the Housing for Accountable Living Transitions/Residential Substance Abuse Treatment (HALT/RSAT) Program for male and female offenders incarcerated at the Rio Consumnes Correctional Center. The SSD uses evidence-based assessments to identify an offender's criminogenic needs and creates an evidence-based treatment plan responsive to those needs. Offenders are assigned to a Reentry Specialist/Case Manager who ensures program adherence and provides one-on-one counselling and support during the 4-12 month in-custody portion of treatment and up to one-year post-release. The project goal is to reduce participant's recidivism rate.

Santa Cruz County Sheriff's Office (SCSO) RSAT Project:

The SCSO is proposing a gender-responsive treatment and reentry program for female offenders housed at the main jail. Approximately 80 participants will be served during the first project year. Participants will be assessed for risk and needs through validated assessment tools and an evidence-based curriculum will be delivered to participants for a minimum of 3 months. Aftercare services will be provided for 12 months post-release.

Tulare County Sheriff's Office RSAT Project:

The TCSO RSAT program proposes to deliver an evidence-based substance abuse recovery program to county jail inmates at the Men's Correctional Facility. The program can house up to 64 participants and uses Cognitive Behavioral Therapy interventions to change the behaviors and attitudes of the inmates regarding criminal thinking and substance abuse issues. The in-custody portion of the program is between 4 and 6 months in length and an aftercare component is offered for up to 12 months post-release. The last month of the in-custody program focuses on reentry into the community. The offender leaves with a discharge plan and identified goals upon their release.
