

Tulare County Sheriff's Office

The Tulare County program targets males between the ages 18-65 with a history of substance use disorders and other maladaptive behaviors that have led to legal issues, with 3 months to a maximum 12 months remaining to serve. The criteria used to determine suitability into the RSAT program is identified with the Correctional Assessment and Intervention System (CAIS). All participants are assigned to an alcohol and drug counselor who facilitate weekly groups, conduct individual counseling sessions, plan treatments, and provide continuing case management while in the residential portion of the program. The after-care services are by referral to appropriate service providers and coordinated pre-release.

Contra Costa County, Alcohol and Drug Services, Behavioral Health Division

The Contra Costa County program is a partnership between the Behavioral Health Division and the Sheriff's Office. The Sober Living Environment (SLE) program provides in-custody Substance Use Disorder treatment and services, group counseling, and individual counseling for participants. Each treatment plan is tailored to individual needs based on assessment results. Participants completing the SLE program are provided up to six months of after-care housing at the Oxford House or another provider that specifically meets the needs of the participant. Transportation services and pre-release planning are also provided.

Sacramento County Sheriff's Office

The Sacramento County Sheriff's Office Residential Substance Abuse Treatment (RSAT) program is designed to assist participants through the entire reintegration process. Services are provided utilizing intensive reentry planning coupled with evidence-based treatment groups and followed by the delivery of broad-based aftercare services. The program participants are given intensive treatment during the duration of their enrollment in the RSAT program and is followed by after-care services in the community for up to one-year post-release.

Santa Cruz County Sheriff's Office

The Santa Cruz Sheriff's Office (SCSO) provides a gender-responsive treatment and reentry program. This proposal stems from the combination of Santa Cruz County (SCC) Board of Supervisors' directive to better address the needs of incarcerated women, the high rate of Substance Use Disorder (SUD) in SCC, and the impacts of the implementation of Assembly Bill 109 (AB 109) on women. AB 109 increased both the number of incarcerated women with serious, chronic SUD issues and the percentage of incarcerated women who have complex barriers to successful reentry.

Kern County Sheriff's Office

This project utilizes a Risk-Need-Recovery platform to break the cycle of drugs, crime and recidivism through the implementation of evidence-based programs of treatment. The target population is males housed at the Lerdo Detentions Facility (Minimum) who meet defined criteria and have a demonstrated history of substance abuse. The program includes both in-custody and out-of-custody (after-care) components and provides inmates with rehabilitative tools for re-entry and productive citizens.

Yolo County Sheriff's Office

The Yolo County RSAT program targets opioid addicted individuals and provides Medicated Assisted Treatment (MAT) in-custody. The target population for this project includes those who enter custody and are placed on withdrawal protocol. The program includes a collaborative of in-custody service providers to address criminogenic needs identified by the Ohio Risk Assessment System (ORAS). Each participant receives individual counseling and reentry planning. Yolo County has also partnered with CFMG/WellPath and Communicare to provide after-care services to participants.

Riverside County Sheriff's Office

The Riverside County Sheriff's Department provides intensive substance abuse treatment to inmates of Riverside County and prepares offenders for reintegration into the community by addressing the high criminogenic risk and needs factors. The program is a cognitive-behavioral approach presented from a therapeutic perspective, which encourages individual empowerment through choice theory and rational thinking modalities. The evidence-based approach emphasizes rational thinking and overcoming criminal thinking and patterns of substance abuse and addiction. The program seeks to break the cycle of drug dependency and criminal behavior. Services and content are delivered through role play, group and individual counseling, and structured activities.
